

Venetian

It's the "Blue House" that you've been hearing about. This 2289 sq foot two story is constructed with Bluwood building components that have been coated with a two part wood protection technology that protects against the damaging effects of rot fungi, wood ingesting insects, and mold fungus growth.

In addition to all this protection, this home offers many other great features. There are four bedrooms, including a master suite with whirlpool tub and large walk in closet, and 2-1/2 baths. The main floor is set up with a very spacious foyer, large great room, roomy kitchen, office, and laundry room.
